The Career Framework for University Teaching

Introduction

The Career Framework for University Teaching is designed to guide and support academic career progression on the basis of their contribution to teaching and learning. The Framework rests on the principle that all academics who teach – whether they be in an education-focused role or in a blended research/teaching role – should continue to strengthen the quality and impact of their teaching activities as they progress through their career. The Framework should be used alongside other mechanisms to evaluate and reward contributions academics make to their institution and discipline (such as research achievement) as appropriate to their role.

Offering both a structured pathway for academic career progression and an evidence base on which to demonstrate and evaluate teaching achievement, the Framework provides a template that universities can adapt to their career structures and progression points. It can be used to advance teaching achievement across the academic career, including appointment, professional development, appraisal and promotion.

The Framework is structured around four progressive levels of university teaching achievement. Level 1 – ‘the effective teacher’ – represents a threshold of teaching achievement which all academics should attain. Level 4 – ‘the national and global leader in teaching and learning’ – is likely to be reserved for those progressing to full professorships solely or predominantly on the basis of their teaching achievement.

For each level of teaching achievement, the Framework addresses the following three questions:

- what is the academic’s sphere of impact in their teaching and learning activities?
- what promotion criteria define the academic’s achievements in teaching and learning?
- what forms of evidence can be used to demonstrate the academic’s teaching achievements?

Please note: the term ‘teaching achievement’ is used to denote an individual’s contribution to and impact on teaching and learning at an institutional, national and global level, including contributions to educational research.

This document is designed to be used in conjunction with www.teachingframework.com where full details of the Framework can be found.

LEVEL 4
National / global leader in teaching & learning

LEVEL 3
Institutional leader in teaching & learning
Scholarly teacher

LEVEL 2
Skilled & collegial teacher

LEVEL 1
Effective teacher
The four levels of the Framework are outlined above. They can be characterised in terms of the academic's sphere of impact in teaching and learning, which expands as they progress to each level. Please note: at level 3, the pathway splits, and individuals may elect to be assessed on the basis of their contributions to education at their home institution, and/or on the basis of their efforts in the scholarship of teaching and learning.

**LEVEL 1.** The *effective teacher* takes a conscientious and reflective approach, creating positive conditions for student learning and demonstrating effective teaching delivery that develops over time. *Their primary sphere of impact is the students they teach and tutor.*

**LEVEL 2.** The *skilled and collegial teacher* takes an evidence-informed approach to their development as a teacher and provides mentorship to their peers to promote a collegial and collaborative educational environment across their school or discipline. *Their sphere of impact encompasses their academic colleagues (as well as students).*

**LEVEL 3a.** The *institutional leader in teaching and learning* makes a significant contribution to enhancing the environment for inclusion and excellence in teaching and learning within and beyond their institution. *Their sphere of impact encompasses the educational environment at their school/university (as well as their impact on academic peers and students).*

**LEVEL 3b.** The *scholarly teacher* makes a significant contribution to pedagogical knowledge by engaging with and contributing to scholarly research which, in turn, influences educational practice within and beyond their institution. *Their sphere of impact encompasses ‘educational knowledge’, at their institution and within the community in their pedagogical fields of interest (as well academic peers and students).*

**LEVEL 4.** The *national and global leader in teaching and learning* makes exceptional contributions to teaching and learning in higher education through national and global influence and leadership in educational practice and/or in pedagogical research. *Their sphere of impact encompasses the national/global education community (as well as the relevant spheres noted above).*
B. Promotion Criteria

The Framework’s promotion criteria are conceptualised around the key capabilities that determine achievement at each level, as illustrated in the diagram below.

Again, it should be noted that, at level 3, career progression splits into two parallel branches – one focused on impact on the educational environment and one focused on impact on educational knowledge – and individuals can opt to focus on one or a combination of these branches. Both branches offer progression to the fourth level, as a recognised global leader in teaching and learning.

All levels of the Framework are cumulative, with achievement at a higher level expected to be in addition to continuing achievement at lower levels. The full promotion criteria corresponding to each level of the Framework can be accessed using the hyperlinks in the table below.

C. Forms of evidence

Further details can be found at www.teachingframework.com/framework/evidence/

There is a range of different forms of evidence that can be used to demonstrate an individual's teaching achievement. These forms of evidence have been grouped into four broad domains:

- **Self-assessment**: a self-reflective narrative describing the individual's educational approach, including how and why it has developed over time, as well as its impact.

- **Professional activities**: a description of the individual's professional activities in teaching and learning, providing insight into the nature, volume and range of contributions made, as well as their particular areas of interest and/or expertise.

- **Measures of student learning**: measures of student learning can be 'indirect' or 'direct'. 'Indirect measures' are evidence that has been shown to correlate with student learning, while not measuring it directly (e.g., pass rates, unsolicited student feedback, employer feedback). 'Direct measures' of student learning capture the knowledge/skills/attitudes of the student cohort, enabling evaluation of student performance over time or against a defined benchmark.

- **Peer evaluation and recognition**: assessments from peers, both internal and external to the university. Peer assessments can relate to a range of different aspects of an individual's teaching achievements, including their: (i) impact on teaching and learning within their institution, (ii) impact and influence beyond their own institution, including contributions to pedagogical knowledge, and (iii) esteem and recognition, through indicators such as teaching awards.

Using evidence in an appointment/promotion case

Teaching achievement can be seen to rest on two key components: approach and impact. Where possible, candidates (e.g. for appointment or promotion) should present evidence from at least one approach domain and at least one impact domain within their teaching and learning portfolios:

- **APPROACH**: a candidate's approach can be viewed as the ‘input’, or the prerequisite, for achievement, and is typically demonstrated by a candidate's self-assessment and, at early career stages, their professional activities;

- **IMPACT**: a candidate's impact can be viewed as the ‘output’ for achievement and is captured through a wider range of evidence, including professional activities at more advanced levels, direct and indirect measures of student learning and peer assessment.

The blend of evidence sources used by candidates will vary considerably, depending on the nature of their teaching contribution. However, a candidate’s ‘approach’ is likely to play a more prominent role at levels 1 and 2 of the Framework, while their ‘impact’ is likely to play a more prominent role at levels 3 and 4.
